Subterranean Termites

Outside

Address: 55 Goshawk St, Eldoraignex18

Harvester Termites

Outside

Area	Findings
Outside sidewalks x 2	We found evidence that you have Subterranean Termites. These are the wood eating termites that destroy among other things trees, roof trusses, wood related furniture, decks and lapas
Inside property - Trees	<p>We found evidence on 6 trees of Subterranean Termites. All of these trees are hollowed out by die termites and is in danger of falling over.</p> <p>We have attached photos of these trees.</p> 
Inside property – Grass & Lawn	<p>The lawn would need to be replaced, and weeded out of the wooden thorns.</p> <p>We found evidence of the nest entrances on the lawn for both Subterranean and Harvester Termites. Both of these types of termites are very dangerous, as the subterranean termites can destroy all wood inside your home. If you leave it and they reach your roof trusses, you will have to rebuild your entire roof. As seen on the photos taken, the harvester termites have already destroyed all the lawn and grass areas. This make way for weeds and wood thorns to take over.</p> <p>The grass and lawn area will have to be re-laid with new grass, all thorn weeds will have to be manually removed, as this type of weed can not be killed with just spraying poison on it.</p> <p>Herewith the photos of the grass and lawn area:</p>
